NEXT GENERATION WINDOW TINT

SMART AND STYLISH IN 4 DIFFERENT SHADES

BLOCK INFRARED HEAT & UV RAYS WITH LLUMAR

At Eclipse, we have tried and tested multiple brands of films and have specifically chosen to carry Llumar Auto Film for over 30 years. They are a highly reputable brand of film providing excellent quality and craftsmanship.

Llumar's Premium Dyed series is the most economical type of auto film on the market. This film blocks light rays and absorbs some heat. Ideal for those who want privacy or add stylish appearance.

Dye window tint has a layer of dye between the adhesive layer and protective top coating made of polyester. The adhesive side sticks to the glass while the protective top coating protects the film from shallow accidental scratches.

The Dye layer produces the shade of the film. At Eclipse, we carry shades from very light 50% to Limo dark 5%.

Most Competitor Dye Films on the market fade either to purple or clear color. Llumar's color-stable technology ensures your film for long lasting performance of 7 or more years.

PRECISION CUT

With the advancement of technology and LLumar's proprietary PrecisionCut Software, all of our films are cut custom to the specific vehicle, year, and model.

99% of vehicles tint installations now require no panels removed and no knife contact to the glass. Keeping the installation process clean and damage free.

Did you know?

Window Film is recommended as a part of a comprehensive sun protection program! The UV Protective Layer on the tint reduces 99% of harmful UV rays.
